

Vapo-Riser

Propane Tank Vaporizer

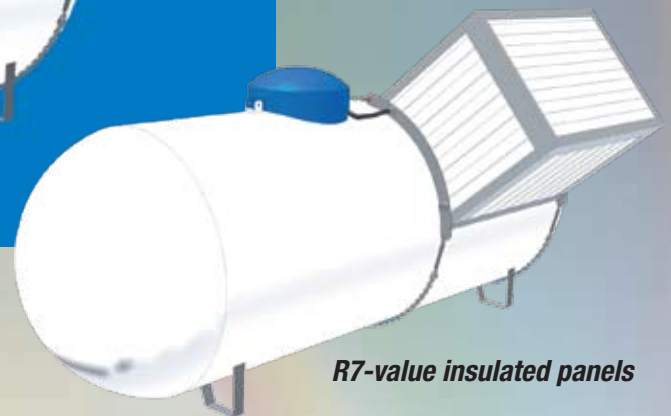

Keep Vapours Rising - Not Costs!

Prism Integrated Solutions Inc. knows that propane tanks hate the winter cold. When temperatures drop, so does propane's ability to produce vapours. Prism's **Vapo-Riser** is an innovative tank heater designed to stop freezing before it stops you.

The **Vapo-Riser** consists of an 8,000 BTU catalytic heater enclosed with R7-value insulated panels. Propane is stripped off the tank to fuel the heater, and the entire unit is strapped securely in place to direct radiant heat onto the tank. A consistent vaporization rate means continuous pressure for your instruments and controls. The **Vapo-Riser's** propane regulator is also mounted inside the heated enclosure to ensure dependable year-round operation.

Prism's Vapo-Riser is economical, efficient, and comes with all the hardware needed for easy installation. Call **Prism** for a quote today and stop the winter cold.
