

# Sweet Treat

## Stop Vent Gas Odours System

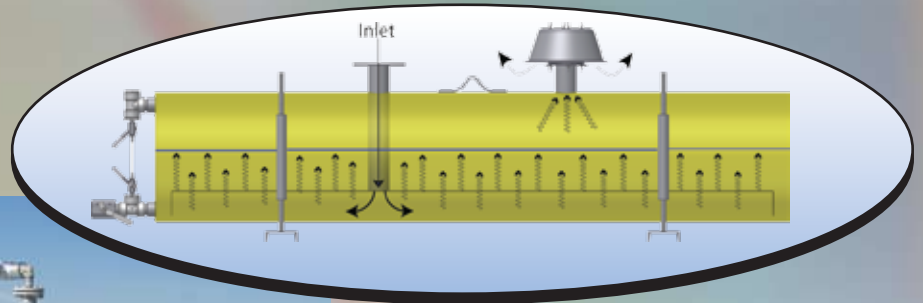

**Prism Integrated Solutions Inc.** has designed the **Sweet Treat System** to eliminate fugitive odour problems on sour oil battery vapour lines. Sour vapours are scrubbed sweet and odour-free, thereby preventing call outs and possible battery shut downs.

Vent gas enters the top inlet of the **Sweet Treat** and is released on the tank bottom into a special scrubbing liquid. The gas filters through a perforated plate with multiple small exit holes to prevent large releases. The sweetened vapours can now be vented to atmosphere without concern. Once the liquid is fully spent, it can be easily replaced through separate fill and drain ports.

**Prism** has been designing and manufacturing various tank and knockout products for years. Our engineered solutions solve customer problems. **Prism** will custom-build a **Sweet Treat System** to suit your maximum tank pressure and flow requirements. Like all our user-friendly products, the size, shape, or configuration of a tank can be designed to your site needs.

*Ask about different pressure and vacuum relief units as well*

- **Variable sizing based on flow requirements**
- **Perforated plate and liquid tray eliminate vapour odours**

**A Spectrum Of Innovation**
